CAREER OBJECTIVE

Motivated 5th semester BS Computer Science student at SMIU, passionate about building real-world software solutions. I thrive on learning by doing leveraging AI tools and modern development practices to turn ideas into working products. Eager to contribute technical skills, creativity, and a growth mindset to a dynamic team.

EDUCATION

Sindh Madressatul Islam University	2023 - Present
Bachelors of science	CGPA: 3.36
Major: Computer Science	
Intermediate – Govt. Degree College Block-7	2021 - 2023
Pre-Engineering	

TECHNICAL SKILLS

Language	C, C++, Java, MySQL, Python
Tools	VS Code, Git & GitHub, Cursor Ai, MS Office, Vercel / Railway / Netlify (Hosting)
Development	Vibe Coding, Ai-assisted development, Web Technologies (basic)

SOFT SKILLS

Problem Solving | Teamwork | Leadership | Time Management | Public Speaking

PROJECT & COMPETITIONS

AI Exam Generator

- Developed an **AI-powered** platform for generating exam papers using advanced language models.
- Integrated **PDF export** functionality for professional exam formatting.
- Implemented secure authentication with **Google OAuth** for user management.
- Built a fully responsive interface using React, TypeScript, and Tailwind CSS.
- Leveraged **OpenRouter API (DeepSeek)** for dynamic question generation.

Remote Laptop Control

- Created a web application to **remotely lock and unlock** a laptop with secure admin authentication.
- Designed a modern, **responsive UI** with smooth animations for seamless user experience.
- Utilized React and JavaScript for frontend logic and local storage for authentication.
- Enabled **real-time device control** through intuitive web interactions.

Business Platform

- Built a modern business platform with **user authentication** and **database integration**.
- Implemented core business functionalities using **Python, FastAPI, and Jinja templates**.
- Managed persistent data storage with **MySQL** and **PostgreSQL** databases.
- Deployed the application using **Railway** for reliable **cloud hosting**.

Autonomous Obstacle-Avoiding Robotic Car

- Developed an autonomous robotic car using the **AT89S52 microcontroller** as part of the **Computer Organization and Assembly Language** course.
- Implemented **real-time obstacle detection and avoidance** using dual **infrared (IR) sensors**.
- Utilized **L293D motor driver** for precise DC motor control and smooth navigation.
 - Applied **low-level assembly programming concepts**, including registers, interrupts, and I/O interfacing, to achieve efficient hardware-software integration.

Enterprise Resource Planning

- Developed an Enterprise Resource Planning System using the Java programming language.
- Implemented CRUD (Create, Read, Update, Delete) functionality to manage data effectively.
- Includes an admin login feature for managing system access and ensuring data security.

Hospital Management System

- Developed a Hospital Management System using the C programming language.
- Utilized file handling techniques to manage data efficiently, allows users to add and delete records.
- Designed to streamline hospital operations by maintaining organized data management.
